John, I'm wiring one of my customers 4-2-8 conversions with a RIC HB2 in the neck position. I've already replaced the volume pot with an original 500K RIC pot and the tone with a 500K RIC push pull pot. Now I have no clue as to how to wire the pickup into this so it will cut out a coil when the knob is pulled and run them both when pushed in. I'm no good at reading actual wiring schematics, but can copy anything if presented in a visual form (like the diagrams on Joey's Bass Notes. Any help would be appreciated! Thanks John!.....Dane
